

2-STRING TRAMPOLINE BED RECONDITIONING SERVICE

Please note that this service can only be carried out between 1st Sept & 31st March.

A standard reconditioning service includes repairing any broken strings, recoating both sides of the bed with protective layers and reapplying the white markings. Additional repairs, and the replacing of any missing anchor bars, will be charged for separately and added to the total reconditioning cost.

Upon receipt of your bed, a thorough inspection will be carried out by our specialists to ensure that the bed can be repaired and reconditioned. If this is possible, we will confirm a final price with you before carrying out any services. Once this has been agreed, your refurbishment is ready to begin. On average, this takes between 4 to 6 weeks.
