

# Bespoke TRAMPOLINES AND PARTS

- Quality products, competitive prices
- 30+ years' experience
- Ongoing support, including safety checks and repairs

# AN INTRODUCTION TO SUPER TRAMP

## Industry specialists for more than 30 years

Super Tramp was founded in 1983 and is now one of the world's leading manufacturers of commercial trampolines. Our services include:

- Bespoke design and manufacture of custom UK-made trampolines, including frames, jumping beds and frame padding.
- Manufacture and supply of competitively-priced spare parts to fit a range of brands
- Ongoing support, including maintenance, safety checks and repairs

We have worked with clients from a variety of backgrounds, including theatre companies, television productions, holiday and leisure parks, trampoline parks, schools, soft play centres and domestic home environments.

Bespoke-design and made triangular stage prop for theatre company, Told By An Idiot

## Bespoke products

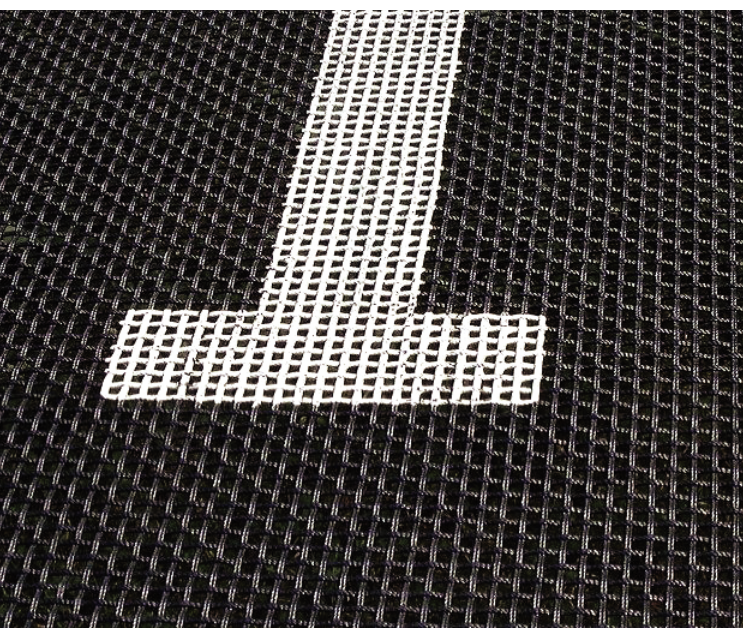

When it comes to trampolines, there's nothing we can't do.

Trampoline beds can be customised to your specifications, including material, size, thickness, colour and webbing, from a range of options. We can even brand with your logo.

Netting can be customised whilst we also fabricate our own steel, all here in the UK.

Our capabilities are not restricted solely to trampolines; we have worked with notable theatre companies and TV productions to produce one-off stage or set props.

If you have a project in mind and need our help, please call us on **01884 675801**.

# Trampoline Springs

## Tapered Springs

We've perfected our tapered springs over several years. They react to the weight of the individual user. This means that different parts of the spring are put under pressure by different users, vastly increasing the lifespan of the spring and your customers' enjoyment. Our tapered springs also feature an elongated hook, so they're easier for you to fit.

### 178mm (7 inch) springs: tapered design

### 216mm (8.5 inch) springs: tapered design

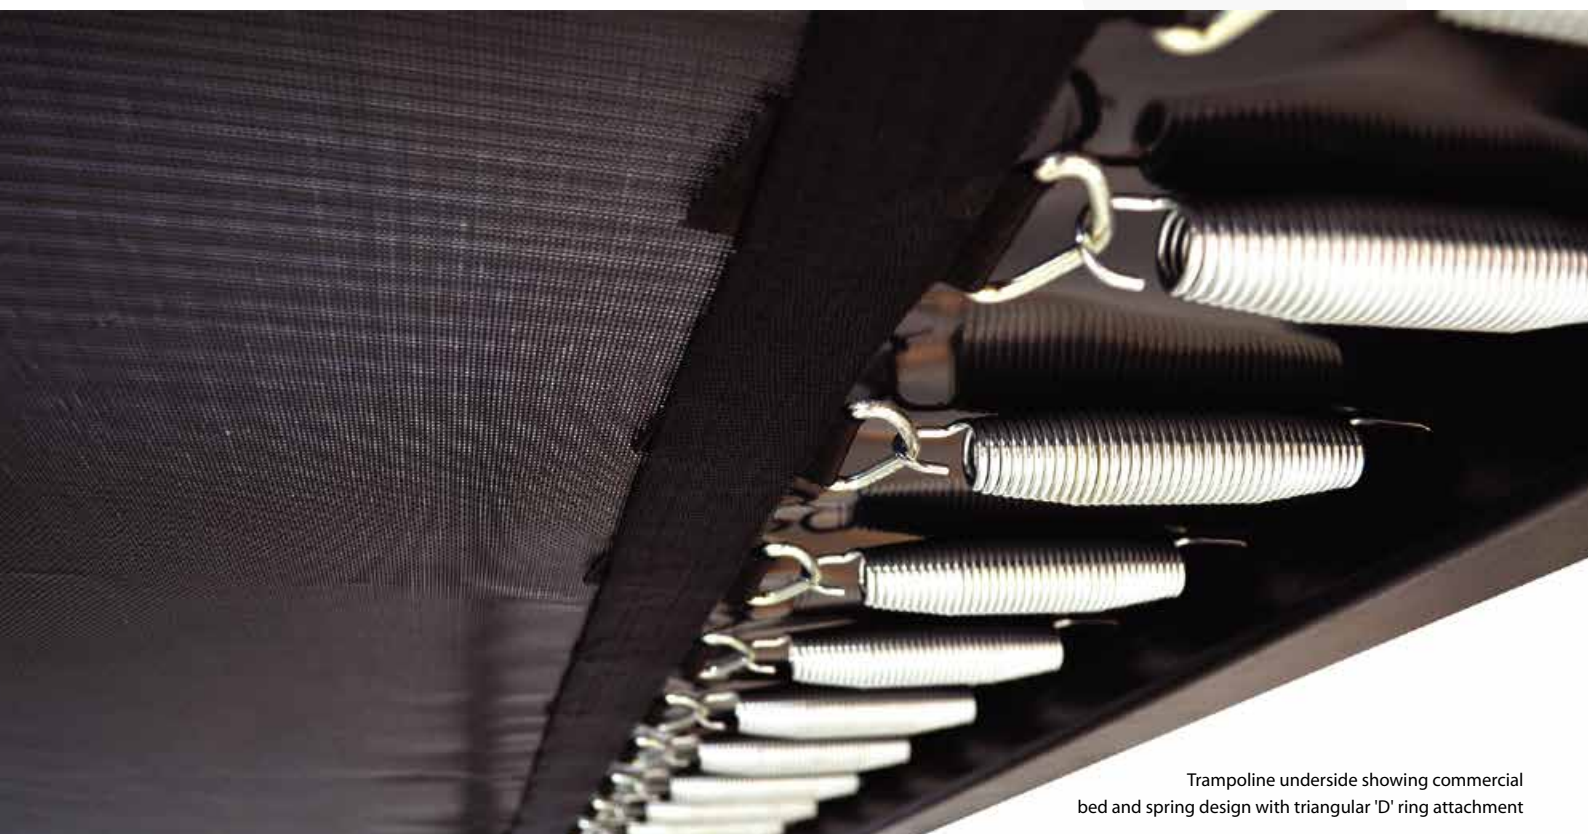

## Consistent Width Springs

Our largest spring is designed for performance trampolines. The consistent width means that all of the coils are used at once, allowing users to bounce extra high. This spring is ideal for larger trampolines that feature a 2 string or web bed.

### 235mm (9.25 inch) performance springs

# Trampoline Beds

Whether working from an existing design, or coming up with a new design concept, our specialist team are on-hand to help. Bed fabric is available in a vast selection of colours, including contrasting webbing, and can be branded with your logo, if desired.

## Polymesh Beds

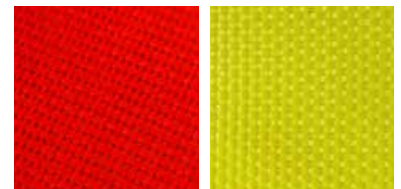

Our most popular beds, these are very competitively priced and adhere to strict quality and safety standards. Single-skin polymesh beds are an economical solution, whilst the stronger double-skin beds are longer-lasting, so offer better value over their life-span.

- Double-skin polymesh bed; available in black as well as red, blue, grey or yellow, over layer of black polymesh with coloured webbing border option.
- Optional spring retaining flaps are available as an extra (pictured), if desired or where necessary.

Yellow double-skin

## Powermesh Beds

Our powermesh beds offer increased control, making them particularly suitable for younger children and gymnasts. They're actually made from one skin of polymesh and one of powermesh, to offer both superior performance and increased durability. These beds can also come with 200mm spring cover extensions if required.

- Double-skin powermesh bed; available in a wide choice of colours, including black, grey, green, blue and red, and your choice of coloured webbing. Optional spring cover extensions available if required.

## 2-String Performance Beds

Our 2-string bed is exclusive to Super Tramp and believed to be the hardest-wearing trampoline bed available in the UK.

### Increased performance

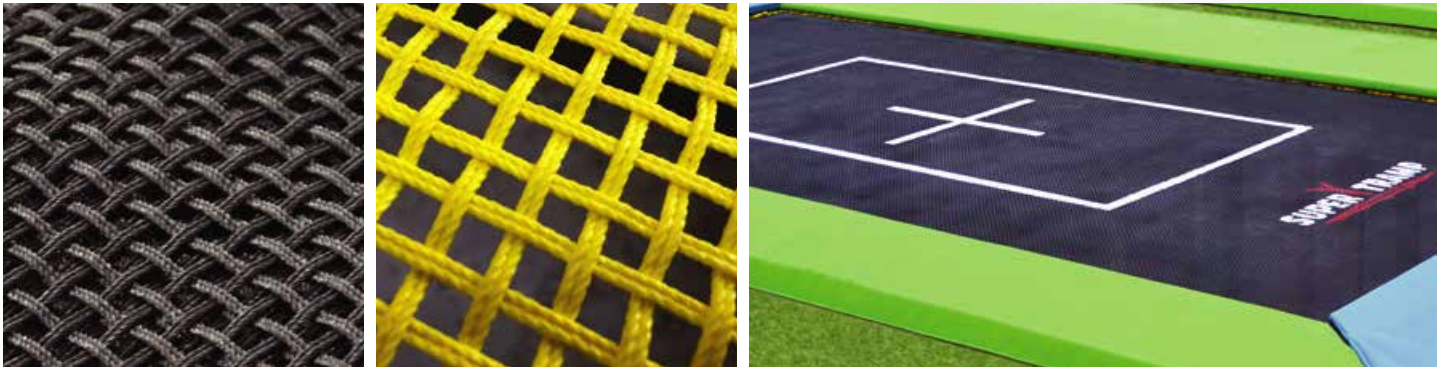

The 2-string bed is similar to a webbed bed, but offers better grip and stability. This helps users to build their confidence, and feel comfortable bouncing higher and performing tricks. The cross-weave design has air pockets between the strings to allow for optimal airflow. This crucial flow of air is the key to the 2-string's exceptional performance, allowing for maximum jump power and uncompromised stability.

The 2-string is advantageous compared to webbed beds which can stretch over time. When the webbed bed stretches, the performance is badly affected and means they need replacing more frequently. The 2-string doesn't have this problem. It maintains its shape, stability and performance, bounce after bounce.

### 2-string performance bed:

Available as a 425 x 213cm, 425 x 183cm and 366 x 183cm bed, in a wide range of colours, including standard white, black and yellow\*.

### Exceptional Durability

Our 2-string bed can last six times as long as a webbed bed. What's more, it can be refurbished and repaired by our specialist team, so could last you for many years. All in all, it offers you superb value for money. The 2-string bed is very easily cleaned, whilst our refurbishment service restores the condition of the bed to as though it were new and extinguishes even the toughest of stains.

### Wide choice of colours, sizes and branding options

Our 2-string bed is available in black, yellow and white as standard. However, a range of other colours can be ordered on request. The bed can also be branded with your logo. Three sizes are available, including a whopping 425 x 213cm option.

Unsure which trampoline bed to choose? Please call us direct on 01884 675 801 so we can recommend the best bed for your needs.

# Bespoke Frame Pads

We can custom-make padding in a range of colours and sizes, right here in the UK.

## Quality materials

We only use commercial standard foam, which is closed-cell and cross-linked for extra durability. Unlike cheaper packaging foam, our padding is designed to maintain its shape, so it offers the same high standard of protection over a longer period of time.

A strong, double-sided PVC coated nylon is used to protect the foam and make the padding easy to clean.

Custom-design frame pads with personalised logo application

## Range of options

All of our pads are manufactured on demand; just let us know the size you need. You'll be offered a wide choice of colours, and can also have your logo printed on the padding if you wish.

Our standard foam is 30mm, but a range of thicknesses are available on request.

Example frame pad colours available. Alternative colours can be sourced.

Custom-design breathable vented frame pads

## Bespoke Steel Frame Fabrication

Our team of specialists can undertake bespoke steel fabrication using high-quality UK materials. Our staff are all fully trained and have extensive experience. Your frames will be manufactured in our south-west England factory, to your unique specifications.

Steel fabrication for commercial trampoline park environment

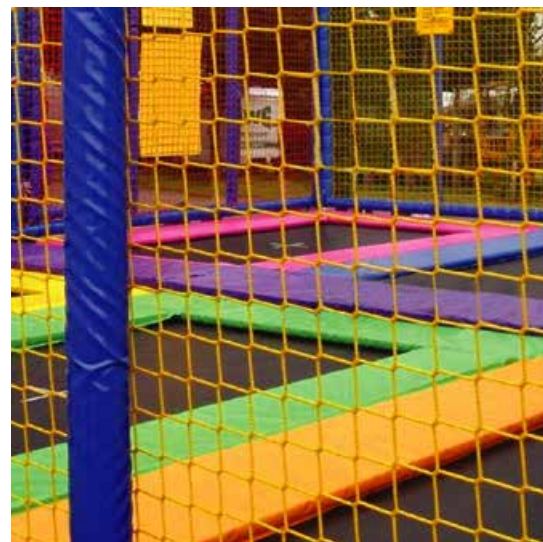

We can then supply and deliver the goods directly to you, giving you the freedom to build it yourself. Or, if you would prefer to leave it to a specialist, we can build it for you. We can also fit beds and springs at the same time.

custom powder-coated frame with bespoke padding.

## Non-cling and Knotless netting

We offer both non-cling and knotless types of commercial-grade netting. The netting can help you to protect both bouncers and onlookers. A huge range of colours are available, and the netting will be supplied to your exact measurements.

Knotless netting for commercial use

## Installation and Aftercare

Super Tramp is more than just a supplier; we aim to build lasting relationships with our clients and can offer a wide range of support services.

Please contact us for more information.

Non-cling netting for commercial use

Whether you need a couple of replacement springs, or a complete commercial trampoline system, Super Tramp is here to help.
